Get Started: GanttProject for Resource Planning

Setup Resources:

The first step to using GanttProject is to add your resources. Resources could be your team, props, tools, rooms, or anything that you use repeatedly over time to achieve your goals. They can be modified to have specific properties with the use of custom fields (to be introduced in the next e-mail guide).

[A step-by-step guide to setting up resources here.](#)

Drag-and-Drop Scheduling and Rescheduling:

Add a task to start scheduling. Simply use GanttProject's drag-and-drop function for a quick and easy way to schedule, reschedule and arrange tasks. Plans change? No problem, this allows you to adapt to unforeseen circumstances without any hassle.

[A step-by-step guide to scheduling and rescheduling here.](#)

Assign Tasks to Resources:

Tasks give you the ability to use its various features to plan and control resources. These features include start and end date, time, real-time calculation of resource utilisation and more. A task should be assigned to at least one resource, and more resources can be added with the "+" button.

[A step-by-step guide to assigning tasks to resources here.](#)

We understand that it is often tough to get a good grasp of something new. That's why we have prepared a series of 6 e-mails to guide you through GanttProject in the following days:

#2/6: Plan

Exercise full control over resource planning. Explore Ganttic's custom data field feature, it is useful in many instances to plan resources effectively.

- 4 min read

#3/6: Organise

Organise task, resource and project data instantly. Apply various perspectives to your plan by using resource grouping, filtering and timeline navigation.

- 3 min read

#4/6: Overview

Plan with a clear overview. Use conditional coloring, views and utilisation for an immediate understanding of the situation.

- 2 min read

#5/6: Share

Share plans with your team. Implement user management, history, notes and Google Calendar synchronisation for better teamwork.

- 3 min read

#6/6: Export

Export your plans. Learn about reports and all its features, including customising data labels, time, filters to export and print.

- 2 min read

This is e-mail #**2/6** of our **Get Started with Ganttlic** series, we've prepared a few tips to get you up to speed with our main features.

Plan with Customisable Data Fields:

Custom Data Fields:

Ganttlic's custom data fields is an important and fundamental feature used to create data sets for your tasks, resources and projects to cover more breadth and depth. Determine relevant information such as a task or a project status, cost, location, skillset, mileage and more with it. Combine with grouping and filtering for maximum configuration.

This feature can be found within a task, resource and project's dialog, whereby you will be prompted to add a new field. Fill in your data label and choose the type from the drop-down list, choices include:

- **Text** - Text shows up exactly as it is entered. Add skillset to resources and fill with skill abbreviations for resource filtering by skill.
- **Number** - Any number data. Useful for sum total calculations in reports.
- **List of Values** - Specify predefined values to use for grouping, filtering or conditional colouring on tasks, resources and projects. E.g 'Status' such as 'Booked' and 'Problematic'.
- **Date** - Add dates for visual milestones in projects.
- **User** - Assign users to tasks, resources and projects.
- **Link** - Insert links to your tasks, resources and projects to include external information.

[A step-by-step guide to custom data fields here.](#)

Organise in One Click:

Resource Grouping:

Speed up your planning process and discover the dynamic resource grouping feature on Ganttlic. It allows you to switch between different grouping options. You can group your resources by projects or by resources' parameters values, e.g locations, departments, any 'list of values' type custom fields and more.

[A step-by-step guide to resource grouping here.](#)

Filtering:

Filter your tasks, projects and resources by title or any other custom data fields as introduced in the previous e-mail guide. This enables you to retrieve a filter's information quickly and easily. Use the filter criteria search box to find the filters you have preset. Filters are available in charts and reports too.

[A step-by-step guide to applying filters here.](#)

Timeline Navigation:

Have your calendar at your fingertips with our easy timeline navigation. Simple click on the date labels to zoom in and out on a date, week, month or year as a replacement for flipping through the calendar. Precision allows you to gain more control over planning your resources. You can schedule down to every quarter of an hour with the custom time range settings, a convenient way to study both overviews and details in a few clicks.

[A step-by-step guide to timeline navigation here.](#)

Highlights At A Glance:

Coloring:

Visual enhancement is a staple tool for planning. Universal color codes such as red for urgent, amber for pending and green available could make your planning more effective. Allow colors to determine a task's status, importance or differentiation. Ranging from neon to pastel, there are up to 40 distinct colors to choose from. It is within your control to assign colors to task or project parameters for a more organised and structured planning environment.

[A step-by-step guide to coloring here.](#)

Views:

Viewing can come in handy when you need to inspect schedules and plans made. Customise and save views by combining resource grouping, tasks coloring, filtering and time period settings. This allows you and your team to view projects and schedules for different uses at any time. Save views lets you return to a customised environment when the need arises.

[A step-by-step guide to creating new views here.](#)

Stay Connected:

User Management:

Working in or with a team often requires multiple accesses to the resources. Manage users by adding them to the planner, assigning default views for them, giving them different permissions to add, edit or see tasks. You can also allow only a selected amount of resources to be seen. Simply keep track of what these users have changed or added with Ganttlic's history and notes features.

[A step-by-step guide to user management here.](#)

History and Notes:

Don't miss a beat when someone on your team makes any changes to the plans. Ganttlic keeps track of any changes made to your tasks, projects and resources, allowing you to view each section's history. The history cannot be altered, so you have full access to what has happened when you were away. Your team is able to add notes to each task to describe changes made or comment on issues.

[A step-by-step guide to history and notes here.](#)

Google Calendar Synchronisation:

The plans you made are not restricted to the confines of Ganttlic or your desktop computer. Ganttlic has made it possible to synchronise your resources with Google Calendar. Allow instant convenience and seamless collaboration with just a click. This will make your projects run smoother anytime, anywhere. You and your team will be able to access resources' schedules from their own devices.

[A step-by-step guide to Google Calendar Synchronisation here.](#)

Introducing Ways to Export:

Reports:

Ganttlic has got the basics covered. With the report feature, export your schedules and plans to .csv files or simply print directly from the planner. We offer an unlimited amount of custom reports, allowing you to include resources, tasks and projects accordingly. For maximum results, you have the choice to include predefine the time period and preset filters for your reports.

To put together a report, simply select the report fields listed and color-coded, then drag them into the grouping level or the detail level as needed. Set the date and include filters accordingly before saving as a new report.
